

HSIAPPS.ORG

We are introducing the application suite - containing web and mobile based applications for mass dog population management and vaccination programs.

The application has a key features helping the organisations to run the mass programs effectively in any area and with higher welfare standards.

GEO TAGGING

Each of the animal captured will be geo tagged with their respective location and the progress can be seen in the real time.

ACCESSIBILITY

Once logged-in, the application can capture the details with low or no connectivity and can store a huge amount of data.

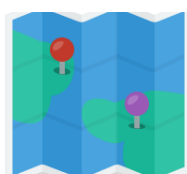

VIRTUAL BOUNDARY

The application allows to create or upload a geo-fence (virtual boundary) for your vaccination areas.

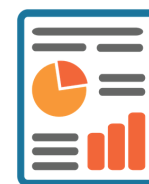

RF-ID SCANNER

The application provides the facility through its clinic mobile app to scan the barcode of the RF-ID number inserted to the animal

GEO SECURITY

The application will only allow the release of the animal within the boundary of 15M of the geo-tag.

REPORT

Web application provides both dynamic and static reporting system with options to view and download in different formats.

TO KNOW MORE

Join us in Animal Care Expo 2019! - GLOBAL ANIMAL ISSUES LEARNING LAB (8:00am – 3:00pm)

Registration open

From 15th April 2019 on hsiapps.org

To avail the organization user account registered with us now and get full access account containing two applications for mass vaccination and sterilisation programs.
